## TECLINE LIMITED DONUT 22 *Special Edition* RED

Donut 22 Special Edition is an ideal tool for both recreational divers just starting their adventure with twin sets as well as for advanced explorers diving each day with a few side tanks, scooters and other additional equipment. This proven design trusted by many satisfied customers went through a unique limited edition.

- small size that goes with proper capacity and simple, safe construction;
- stable position underwater with twin set and together with several tanks on the side;
- streamlined shape allowing for entering the narrow spaces;
- durable material – UV resistant and hardy;
- capacity big enough for the wing together with two tanks and a side tank to remain on the surface and after having it put on by the diver, to give him a high position above the water;
- quick release of gas in each position with the use of both inflator and a back valve (dump valve);
- separated placement of the hoses regardless of the type of regulators being used and regardless of the configuration;
- safe and easy access to valves both under the water and on the surface with the wing fully filled;

# TECLINE DONUTS 22 *Special Edition*

**Phil Short**

**„I know that well-made, reliable equipment can save your life“**

*Phil Short has been diving for over 20 years. During this time he has logged over 6000 dives with over 3000 hours on rebreathers. Phil deals with preparing and testing rebreather systems; he is also a trainer preparing both new divers and other instructors for CCR diving. He has been taking part in many diving expeditions in places never visited before. Phil has also cooperated with many scientific organizations in the field of underwater research. He acts as a dive industry consultant for many diving equipment manufacturers.*

As an Instructor Trainer, scientific diver and Explorer quality, well-made reliable equipment is quite simply 'life support'. I have worked with Tecline over the last few years, teaching CCR classes for their customers, presenting on product at dive shows and consulting on Tecline product and when offered the opportunity to work with Tecline in the design of a CCR specific wing/BC was excited at the prospect. Through various prototype phases of development and design we arrived at the Tecline Donut 22 SE'. The aim was to make a tough, functional, reliable and long lasting product that specifically met the needs of the Technical CCR Diver. Many CCR have a lot of weight in the lower section with 1st stages and cylinder valves in this position and are buoyant in the upper section due to the counter-lung/lungs. The Donut 22 SE was designed to offer a larger buoyancy chamber at the base and smaller at the top to specifically meet the trim requirements of CCR Diving. The fitting of the inflate mechanism and dump to rubber plates add strength and longevity to the design and, as with all Tecline product I have personally used to date, build quality and materials are exceptional.
